PROJECTS

A full selection of projects can be found at jmalt.me/projects

'SCD' Issue Tracker

January 2019

A live social media dashboard equipped with natural language processing built at CuHacking 2020.

- Implemented **natural language processing** to track sentiment towards a company on social media.
- Used a **Flask** and **Python** back-end to communicate with a front-end written in **Javascript** with **React**.
- Leveraged **RESTful APIs** to scrape Twitter for information about the company
- Used various design frameworks such as **Material-UI** and **Bootstrap** to quickly prototype a design

Success Stories of New Canadians

November 2019

Success Stories of New Canadians was a website made in collaboration with a local professor and two peers.

- Designed and built a website to fit specifications laid out by client.
- Used **React** and **Gatsby** to serve a fast static website.
- Utilized **GraphQL** and **Netlify** to allow for easy editing of the website as well as dramatically reducing load times.
- Was responsible for the implementation of a **full-text search** as well as reducing website load times by over **200%**.
- Arranged weekly meetings with team to coordinate design and technical details about project.
- Used **Git** for version control.
